SO NOW YOU HAVE THIS MESSY ND LOUD AUDIO TRACK  
WHAT DO WE DO WITH IT??????

**DO NOT TAMPER

## RULES OF THE ROAD FOR EDITING... PT 1

Header HAS to remain intact, if you can't tell visually where it is, generally it ends around the 2-2.5 second mark

some sources cite that the end must remain intact as well, I have tampered with it and it worked, but try at yr own discretion.

SO, SITEMASTER WILL, U MITE ASK YRSELF  
HOW DO I GET CRACKIN?

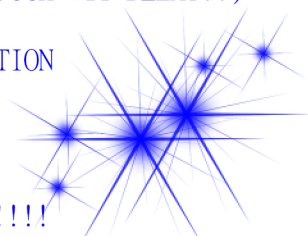

- Select the "Safe Zone" with your cursor
- Effect Tab - Pick and choose from there..

This is the [experimental phase](#) - Go Nuts !  
Overlap effects, use multiple, change your  
selection, do whatever.

CHANGING THE PITCH HAS CONSISTENTLY CORRUPTED  
IMAGES FOR ME, BEST TO AVOID MESSING WITH IT.

TRY THESE !!!!!

- ECHO (FUCK WIT DELAY!!)
- INVERT
- DISTORTION
- REVERB

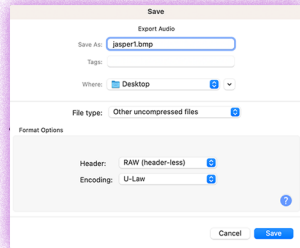

PATHS !!!!!

- Effect > Delay and Reverb > Echo
- Effect > Special > Invert
- Effect > Distortion & Mod > Distortion
- Effect > Delay and Reverb > Reverb

I' M THOROUGHLY IMPRESSED WITH MY EDITS.  
HOW DO I REAP WHAT I SOW ???

1. In Audacity go to File > Export > Export Audio..
  - File Type: Other Uncompressed Files
  - Header : RAW (header-less)
  - Encoding: U-LAW

2. Change the file name in the bar i.e. “jasper” to “jasper1”

this is to keep track cuz the file  
name would otherwise be identical

3. Change the file extension from .raw to .bmp

you' re gonna get a few popups saying “ohhh  
no don' t do that!!! you *really* shouldn' t do  
that!!” that means you' re getting somewhere.

DID U KNOW?

Adobe Photoshop can open RAW files as images.

If u leave yr file as a .raw, u can open it with photoshop, so long as you input the pixel w:h dimensions manually.

you can get some interesting results this way too! But it's not why we're here...

YR NEW .BMP FILE SHOULD NOW BE SAVED TO YOUR DESKTOP, IT CAN BE VIEWED IN PREVIEW OR OPENED WITH PHOTOSHOP.

THAT IS...IF ALL WENT WELL.  
WHICH IT DOESN' T ALWAYS !!!!!!! D:<
